Airbnb Connection API

⚠ To use this API you should have User, API Key and at least one Property.

ℹ Staging URL: `https://staging.channex.io`

Production URL: `https://app.channex.io`

Authentication

All methods require the `user-api-key` header for authentication purpose.
Please, read more about that at our docs: API Reference | Channex.io

Connection link

Airbnb use OAuth for authentication and connection mechanic, as a result to connect Airbnb to Channex, we should generate an Auth link, which will be provided to the property owner and used by him to connect Airbnb to Channex.

The Channex connection link supports 3rd-party redirect, which can be used to keep the User inside the PMS without the need to work in Channex interface directly.

API Specification

```
POST {{server}}/api/v1/meta/airbnb/connection_link

{
  "connection_link": {
    "group_id": "e1e3071e-13a5-4aa8-9ac0-18a8b5e4be1b",
    "properties": [],
    "channel_id": "b8f8b7c8-3e4a-4d5f-9a1b-2c3d4e5f6a7b",
    "redirect_uri": "https://app.example.com/channels/callback",
    "failure_redirect_uri":
"https://app.example.com/channels/callback/error",
    "token": "",
    "title": "My Airbnb Channel",
    "settings": {
      "booking_amount_settings": "Payout Amount",
      "cohost_payout_calculations": false,
      "email": "email_address",
      "min_stay_type": "Arrival",
      "send_email_notifications": true
    }
  }
}
```

properties [required]

List of Property ID which should be associated with new connection.
Please keep in mind that Channex allows you to connect multiple properties to one Airbnb connection.

group_id [required]

Group ID associated with Property, will be used to associate new Connection with that Group.

redirect_uri [optional]

Target endpoint for redirect. When user connect Airbnb, we will create new Channel and redirect to provided endpoint with `channel_id` and `token`.

failure_redirect_uri [optional]

Target endpoint for redirect. Used when connection is failed.

token [optional]

Free form token which can be used to associate incoming redirect with specific User at PMS.

channel_id [optional]

Channel ID. Used in case of re-connection flow for already existed channel.

title [optional]
String value what represent a title for new Channel.

settings [required]

Object with Connected channel settings.

> **min_stay_type [optional]**
>
> Because Airbnb support only 1 type of min stay, you should define what is type from current property state will be used for this operation. Allowed values: “Arrival” and “Through”.
>
> **booking_amount_settings [optional]**
>
> Represent type of total amount what will be saved at Bookings. Allowed values: "Payout Amount", "Total Paid Amount".
>
> **cohost_payout_calculations [optional]**
>
> Boolean flag then represent should we decrease amount by CoHost commission or not.
>
> **send_email_notifications [optional]**
>
> Boolean flag then represent should we send email notifications about new bookings or not.
>
> **email [optional | required]**
>
> Email address for notifications about new bookings. Required when send_email_notifications is true.

Response

```
{
    "data": {
        "attributes": {
            "url": "https://www.airbnb.com/oauth2/auth?
client_id=vkchv37nyv02w16ncouipz2y&redirect_uri=https://staging.channex
.io/api/v1/meta/airbnb/auth_redirect&scope=property_management,messages
_read,messages_write&state=%7B%22channel%22:%22AirBNB%22,%22group_id%22

        },
        "type": "connection_link"
    }
}
```

Redirect URL

```
GET {{redirect_uri}}?success=true&channel_id=CHANNEL_ID&token=TOKEN
```

Notes

Please keep in mind that when the User connects Airbnb to Channex we will automatically create a new inactive Channel. This is the channel you will need to edit and map.

Get listings

When the channel is created and the Airbnb account is associated with Channex you are able to get list of Listings.

```
GET {{server}}/api/v1/channels/{{CHANNEL_ID}}/action/listings
```

Response

```
{
    "data": {
        "listing_id_dictionary": {
            "values": [
                {
                    "id": "42544559",
                    "synchronization_category": null,
                    "title": "Test Property · Test Channex Property",
                    "type": "apartment"
                }
            ]
        }
    }
}
```

Get Listing details by ID

```
GET {{server}}/api/v1/channels/{{CHANNEL_ID}}/action/listing_details?
listing_id={{LISTING_ID}}
```

Response

```

                    "type": "group"
                }
            },
            "known_mappings": {
                "data": []
            },
            "properties": {
                "data": [
                    {
                        "id": "71d34923-a8be-4682-9625-e4a2f080df92",
                        "type": "property"
                    }
                ]
            }
        },
        "type": "channel"
    }
}
```

Get mappings for channel

```
curl --location --request POST
'{{server}}/api/v1/channels/mapping_details'
--header 'user-api-key: {USER_API_KEY}'
--header 'Content-Type: application/json'
--data-raw '{
"channel": "AirBNB",
"settings": {
"tokens": {
"access_token": "es9t7tfkbmfvtr06hk0p5032",
"user_id": 338905184
}
}
}'
```

`tokens` should be used from existed Channel.

Response

```
{
    "data": {
        "listing_id_dictionary": {
            "values": [
                {
                    "id": "42544559",
                    "synchronization_category": null,
                    "title": "Test Property · Test Channex Property",
                    "type": "apartment"
                }
            ]
        }
    }
}
```

Create mapping

`POST {{server}}/api/v1/channels/{{channel_id}}/mappings`

```
{
  mapping: {
    rate_plan_id: "{{CHANNEX_RATE_PLAN_ID}}",
    settings: {listing_id: "{{LISTING_ID}}"}
  }
}
```

Response

```
{
  "data": {
    "attributes": {
      "id": "bb71a7c0-3444-4270-80fa-0158f06b4dea",

    }
}
```

Pull Future Reservations

```
POST {{server}}/api/v1/channels/{{channel_id}}/action/load_future_reservations

// EMPTY PAYLOAD
```

This method can be used to trigger Load Future Reservation for whole channel. This action can be useful when new channel is created and all listings are mapped.

```
POST {{server}}/api/v1/channels/{{channel_id}}/action/load_future_reservations

{
  "listing_id": AIRBNB_LISTING_ID
}
```

This method can be used to trigger Load Future Reservations for individual listing what can be useful in case, when new Listing connected to already existed channel.
NOTE: This way is preferred.

Execute API Proxy request

```
POST {{server}}/api/v1/channels/{{channel_id}}/action/api_proxy

{
    "request": {
        "endpoint": "listing_descriptions",
        "method": "get",
        "params": {
            "listing_id": "42546546"
        },
        "payload": {
        }
    }
}
```

method: PUT, POST, GET, DELETE
endpoint: Airbnb method URL
params: GET Arguments
payload: request JSON body

Response

Airbnb API response.
