Airbnb Inquiry

Airbnb have Inquiry and Reservation Request messages at our system. Both type of messages can be receive through webhooks (Webhook Collection | Channex.io).

Also, you can fetch this type of event through Live Feed Event API (see attachments).

When you receive inquiry or reservation request you can react to this event by accept it or decline.
For Reservation request you can take a look API in attached file.
For Inquiry you should use same API endpoint but with next payload:

To correctly approve Inquiry we will expose next API:

Pre-approval response:

```
{
  “resolution": {
    “type": "preapproval",
    “block_instant_booking": true | false
  }
}
```

Where block_instant_booking is boolean flag which lock ability for other guests to reserve listing at same dates via instant booking flow.

Special Offer:

```
{
  “resolution": %{
    “type": “special_offer",
    “total_price": Integer_amount_with_cent
  }
}
```

For special offer, you should provide total_price in lower fraction size (10000 for 100.00 USD)
