# Airbnb Reservation Request (05.02.2024)

## Receive Reservation Request

To receive Reservation Requests from Airbnb you can setup webhook and handle message with type `reservation_request` what will have details about incoming reservation.

Take a look into documentation about webhooks: Webhook Collection | Channex.io

## Accept Reservation

To accept Reservation request you can use next API Call:

```
POST {{server}}/api/v1/live_feed/{{live_feed_event}}/resolve

{
  "resolution" : {
    "accept" : true
  }
}
```

## Decline Reservation

To decline Reservation request you can use next API Call:

```
POST {{server}}/api/v1/live_feed/{{live_feed_event}}/resolve

{
  "resolution" : {
    "accept" : false,
    "reason" : REASON_FOR_DECLINE,
    "decline_message_to_guest" : "Message for guest",
    "decline_message_to_airbnb" : "Message for Airbnb"
  }
}
```

Where REASON_FOR_DECLINE can be one of next values:

- `dates_not_available`
- `not_a_good_fit`
- `waiting_for_better_reservation`
- `not_comfortable`
