Availability Settings API

To update availability settings you can use next API endpoint:

`PUT /api/v1/channels/:channel_id/execute/update_availability_rule`

with next payload:

```
{
  "channel_rate_plan_id": "f6158097-2755-42b3-bf1a-29e39f0442de",
  "data": {
    "day_of_week_min_nights": [-1, -1, -1, -1, -1, -1, -1],
    "day_of_week_check_out": [true, true, true, true, true, true, true],
    "day_of_week_check_in": [true, true, true, true, true, true, true],
    "booking_lead_time": 0,
    "default_max_nights": 365,
    "default_min_nights": 1,
    "max_days_notice": -1,
    "turnover_days": 0
  }
}
```

Field description

day_of_week_min_nights

List with 7 Integer values. Position of item at list represent weekday starting from Sunday.

Minimum number of nights that guests can stay if the reservation starts on a specific day of the week.

Minimum number of nights if the trip starts on a specific day of the week, must fall within the range of -1 to 1125. -1 mean then restriction is not applied.

day_of_week_check_out

List with 7 Boolean values. Position of item at list represent weekday starting from Sunday.

Day of week guests are allowed to check out.

day_of_week_check_in

List with 7 Boolean values. Position of item at list represent weekday starting from Sunday.

Day of week guests are allowed to check in.

booking_lead_time

Integer value. Valid values are 0-24, 48, 72, and 168

Minimum amount of notice required before guests can book.

default_max_nights

Positive integer value.

Default maximum night requirement, must fall within the range of 1 to 1125.

default_min_nights

Positive integer value.

Default minimum night requirement, must fall within the range of 1 to 1125.

max_days_notice

Integer value. Valid values are -1, 0, 30, 60, 90, 120, 150, 180, 210, 240, 270, 300, 330, 365. Pass 0 to make ALL future days unavailable. Pass -1 to reset ALL future days to available.

Maximum number of days between the booking date and the check-in date. Default value is -1.

turnover_days

Non-negative integer value. Valid values are 0, 1, and 2.

Amount of days Hosts require for preparation between reservations.

Response

Success result

Response will contain object similar to arguments under `data` key. Status code will be `200`.

Validation error

Response can contain validation error. In that case status code will be `422`.
